

#### Scenario:

You are a freshman student who has just gotten to the University of South Carolina. You are initially worried about gaining the “freshman 15” so you want to be able to track your nutrition. You also want a convenient way to order food.

Task 1: Enter all of your current health information into the “My Progress” section.

Task 2: Order a Smoothie and pick out which ingredients you want and then pay for it.

Task 3: Navigate to the main menu and then set up a time and date to go to the gym of your choice.

#### Notes

What changes you should make to your application:

Add a few more main menu tabs (Step tracker ect.)

Add a way to send your gym reservation to friends

Design a better first page for the app

What you need to keep the same for your application:

Keep the layout of the whole app the same

Keep the way your order food and pick out everything

Keep the graph in the My Progress tab
